Product Description

INTRODUCTION:

The fire alarm project is a safety device designed to detect and alert individuals in the event of a fire outbreak. This project utilizes the IC 555 timer, a widely used integrated circuit, in conjunction with a buzzer, 9V battery, and a 1N4148 Zener diode acting as a heat sensor. The system works by monitoring changes in temperature and triggering an alarm when the temperature exceeds a predefined threshold, indicating the presence of fire or excessive heat.

ADVANTAGES:

- Cost-effective solution for fire detection.
- Simple circuit design using easily available components.
- Portable and battery-powered, allowing it to be used in various settings.
- Provides an immediate audible alert to warn occupants of potential danger.
- Can be integrated into larger fire safety systems.

APPLICATIONS:

- Residential buildings: Houses, apartments, and dormitories.
- Offices and commercial spaces.
- Industrial facilities and warehouses.
- Educational institutions: Schools, colleges, and universities.
- Public places: Theatre's, shopping malls, and airports.
- Any location where early fire detection is crucial for safety.
