Product Description

This is a 6x6x5mm NO (normally Open) DPDT (Double Pole Double Throw) tactile push button. This push button allows you to power the circuit or make any particular connection only while pressing the button. It is widely used as a standard input “button” on electronics projects. A tactile switch is easy to mount and solder on PCB to make a permanent connection. It works perfectly with the breadboard to make a temporary or solderless connection. These switches offer reliable dome contact technology and strong tactile feedback, with multiple operating forces to choose from.
