Product Description

The SYB-170 Mini Solderless Breadboard is named for its 170 tie points. It has 17 columns of 10 holes, which are separated into two pairs by a central notch, and labeled 1 to 17. Each column is also labeled, with a letter from A to J to that they can be easily referenced in instructions (like the squares on a chess board). It has a peel and sticks adhesive backing as well as two mounting holes for M2 screws so you can anchor it down. This solderless, re-usable breadboard is made from sturdy ABS plastic housing. Great for prototyping, testing and creating add-on modules or new circuits. Its standard nickel plated spring clips ensure longevity and firm grip. As a single unit, the PTBB-170W provides one large (170) tie-point IC circuit terminal strip. If you run out of space, the PTBB-400W can be pair with additional breadboards (below) to accommodate larger projects. Works with LEDs, transistors, diodes, capacitors, and resistors.

Features :

1. Use: experimental, testing, robot
2. Matching jumper, diameter 0.8mm
3. Accepts 20-29 AWG wire sizes.
4. Adhesive-backed for permanent mounting.
5. Phosphor bronze nickel plated spring clips

Specifications :

Tie-Points	170
Material	ABS
Mounting Holes	M2
Length (mm)	48
Width (mm)	35
Height (mm)	9
Weight (gm)	14
