**Categories:** [Engineering project](#), [IC & Transistor](#), [Mini Project](#), [Projects](#)

## Product Description

### ABSTRACT:

Waking up in the morning is quite a task for many people. The aim of this project is to build an alarm clock which will help people go get up a little bit easier. Additionally if one forgets to set alarm at night, this alarm will turn on automatically in the morning and only turn off manually so you will have to wake up.

### INTRODUCTION:

The Morning Alarm project aims to create a simple and effective alarm system using components such as an LDR (Light Dependent Resistor), IC 555 Timer, 9V Battery, Buzzer, LED, and a 100K preset resistor. This project serves as an alarm clock that can be used to wake up individuals at a desired time. By utilizing light sensing capabilities, the alarm can be triggered based on the ambient light conditions, simulating a natural sunrise effect.

### Working Video

---

### Disclaimer:

This is a handmade complete working Models, Projects & Activity kits supported by rough study material to make a suitable projects report by the student. It is using Cardboard/Wooden base, Paper, Foam based board, stationary items, Electronic-Electrical Components, Mechanical & Scientific goods as per the requirement of a particular model. Colour of product and decoration item may be varying according to availability of material but we make ensure that we will deliver the product with same working, structure and dimensions as describe in product description section.
